Notes: * $p < .10$, ** $p < .05$, *** $p < .01$; CASH columns one-tailed (Campello $\delta > 0$ hypothesis), UncResCEO two-tailed; significant in **bold**. SEs (parentheses) double-clustered firm $\times$ calendar-quarter. Cols (1)–(4) are the same canonical eq. (14) (2010:Q1–2016:Q4 panel, POST = 1 only 2016:Q3–Q4, CASH = $cheq_t / (atq_{t-1} - cheq_{t-1})$ (Table-8 net-of-cash), 5 lagged firm controls, standardized IBES-summary consensus EPS, FIRM + INDUSTRY(FIC100) $\times$ QTR FE); they differ only in DV (CASH vs. the DWZ Eq. 4 CEO Q&A residual uncertainty, file-name $\rightarrow$ gvkey via the H1 panel, firm-quarter mean, not winsorized — a novel extension with no Campello benchmark) and treatment (β^{UK} non-negative tercile vs. textual search: > 5 vs. 0 entries of Campello’s 9 verbatim Brexit keywords counted in 10-K Item 1 (Business) + Item 7 (MD&A), Campello’s documented text-parsing scope, Supplement App. E). Textual treated/control counts (1,458/465) differ from Campello’s 807/433 — a documented data deviation, not a code defect. Cols (5)–(6) verbatim Campello Table 8 (cols. 1–2; CASH only). [‡]within- R^2 ; [†]Campello R^2 includes absorbed FE (not directly comparable). Campello figures are a reference benchmark, *not* a tuning target; this table reports measured output and asserts no replication verdict. *Treatment assignment* (firm counts, step1 panel): β^{UK} -tercile 565 treated / 482 control vs. Campello 449/360; textual Item 1+7 1,458/465 vs. Campello 807/433. The regression *Firms* row is smaller — the estimation sample retains only assigned firms also in the step1 panel with non-missing DV and all controls (standard listwise attrition); the over-assignment vs. Campello is a documented data deviation, not a code defect.

Table 12: Variable Forensic Audit — Rebuild vs. Campello et al. (2022 JFQA) Table 1 Summary Statistics, all three panels (2010:Q1–2015:Q4, 1% winsorized within quarter; Campello convention).

Notes: Both sides machine-derived (.diag_summary_stats_full.py); no value hand-typed. **Rebuild** = winsorized (apples-to-apples); Campello publishes only mean/SD/med/IQR/N (no min/max — that comparison is impossible). **RAW min/max** = pre-winsor ours-only garbage sniff (no benchmark). *Flag* = crude same-ballpark hint (mean & med within 25%, same sign), not a verdict; universe differs (ours = $\text{step1} \cap \beta^{UK}$ -estimable, larger-firm skew) so gaps may be composition — perfect match is not the bar (symptom-chasing forbidden). **Canonical CASH DV (Sina-authorized 2026-05-17)** = $\text{cheq}_t / \text{atq}_{t-1}$ (**Campello Table-1 note; the definition consistent with all four Campello-reported CASH tables, incl. supplementary Table C.2 — supersedes the Table-8-caption net-of-cash phrase, a paper inconsistency**); it matches Campello across all panels. The lone **CHECK** row **CONSENSUS_EPS** is *not* garbage: it is the Sina-ratified IBES-summary statsum MEANEST z-score (forecast-only, no actual; §G.7/§G.8) — a documented non-replication, its centre matching Campello while the standardized dispersion sits far below Campello's reported SD 3.51 (§B/§G). On record in `campello.variable.audit.2026.05.17.md`; measured output only, no replication verdict (gated).

Notes: Staggered state data-breach disclosure-law DiD, 1997–2015 (annual); *Disclosure Law* switches on the year after the firm's HQ-state law passes ($Y+1$). Column (1) reproduces the published benchmark verbatim (Boasiako-O'Connor Keefe (2020) EFM Tbl 2 col 1 (p538)); column (2) is this paper's greenfield replication (industry+state+year FE, state-clustered SE). All continuous variables winsorized at 1st/99th percentiles (pooled). Significant coefficients in **bold**. R^2 for column (1) is the published adjusted R^2 . Standard errors (in parentheses) clustered at the state level. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$ (headline one-tailed $\beta > 0$ for this paper; controls two-tailed; published significance as reported in Boasiako Table 2).

Notes: Summary statistics for the disclosure-law DiD sample, 1997–2015 (annual). Boasiako-Keefe (2020) statistics reproduced verbatim from Table 1 Panel A ($N = 56,646$). “This paper” statistics from the F1D greenfield replication panel ($N = 48,336$). All continuous variables winsorized at 1st/99th percentiles (pooled). Variable definitions follow Appendix A Table A1 of Boasiako-Keefe (2020). Firm Age reported in natural logarithm units.
