

Hold On to Your Cash:

Managerial Speech Uncertainty and Financing Conservatism

Sina Soleimanipour*

April 19, 2026

Abstract

Abstract placeholder. A two-paragraph abstract following finance/econ convention will be drafted last (T47) once §I introduction is finalized. Target: 150–200 words. Key claims: (i) managerial Q&A speech uncertainty (UncAnsMgr) predicts within-firm cash accumulation (HC) and leverage reduction (HL) at the firm-quarter horizon, concentrated among credit-constrained firms (HFC); (ii) the effect operates through a precautionary financing channel (Opler et al. 1999; Bates et al. 2009) and is consistent with the financial conservatism cluster documented by Minton and Wruck (2001); (iii) exploratory tests on capital expenditure reveal a competition-moderated investment response interpretable through Grenadier’s (2002) competitive real options framework.

Keywords: TODO.

JEL classification: TODO.

1 Introduction

Section placeholder. Drafting deferred to T46 (per skeleton convention: introduction written AFTER the body, once core claims are stable).

2 Conceptual Framework and Empirical Strategy

Section placeholder. Drafting in T44.

3 Main Empirical Analyses

3.1 Data, Sample, Variables, and Specification

We construct a quarterly panel of 112,968 earnings-call transcripts covering 2,429 unique firms over fiscal years 2002–2018, sourced from S&P Capital IQ. Call-level speech metrics are merged with Compustat quarterly fundamentals and CRSP daily security data. Following Bates et al. (2009), we exclude financial firms (SIC 6000–6999) and regulated utilities (SIC 4900–4999); we refer to this filtered universe as the Main sample throughout.

The dependent variables are CashRatio (cheq/atq, the linear cash-to-assets form adopted by Bates et al. 2009), Leverage ((dlttq+dlcq)/atq),

and DebtToCapital. The primary speech-uncertainty regressor is UncAnsMgr, a call-level measure of manager Q&A uncertainty constructed from the Dzieliński et al. (2021) uncertainty wordlist applied to the all-manager pooled aggregation in the spirit of Bushee et al. (2018); full construction details appear in §2. Base controls are lnAssets, TobinsQ, ROA, Capex, DivDummy, sCFO, and a unit-by-DV Lagged DV. Extended controls add SalesGrowth, RDSales, CashFlowAt, and DailyVola. The reciprocal control rule applies: leverage enters as a control in cash regressions, and cash enters as a control in leverage regressions.

We estimate PanelOLS specifications across a four-step fixed-effects ladder (Industry + Calendar Year, Firm + Calendar Year, Industry + Calendar Year-Quarter, Firm + Calendar Year-Quarter), with standard errors clustered at the firm level. Each main suite reports twelve columns: contemporaneous and one-quarter-lead dependent variables crossed with the FE ladder. Inference for the IV in this section follows the one-tailed convention pre-committed in §2.

4 Additional Analyses

Section placeholder. Drafting in T43.

5 Discussion and Conclusion

Section placeholder. Drafting in T45.

Notes: Summary statistics for variables used in the hypothesis tests. Sample period: 2002–2018. Anchor sample (H1, Main): 88,205 earnings-call observations across 1,884 firms. Unit column: C = call-level, F = firm-year. N varies by row because each variable is summarized on its anchor panel's Main sample (complete cases per variable); per-suite samples differ due to lags, control availability, and merges.

Adj. R^2	0.171	0.484	0.141	0.291	0.017	0.166	0.001	0.057

Notes: * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$ (one-tailed for IVs, $\beta > 0$; two-tailed for controls). Significant coefficients in **bold**. Standard errors (in parentheses) two-way clustered (firm, calendar quarter). Main sample (excludes financial and utility firms). Firms with fewer than 5 calls are excluded. R^2 includes absorbed fixed effects (not within- R^2).
