Notes: Col. (1) linear probability model; (2) logit (raw log-odds); (3) LPM adding firm and year-quarter fixed effects. A firm-fixed-effects logit is infeasible here (perfect separation: the deal/cash base rate leaves most firms with no within-firm outcome variation). UncResCEO is the residual CEO Q&A uncertainty; all controls shown; SEs clustered by firm; * $p < .10$, ** $p < .05$, *** $p < .01$ (two-tailed).
